

my friends who have sorensen, said that their sorensen installers told them not to give me their ip addresses because it will make their videophones screwed up. their installers forced me to give them my ip address. i don't think it is right. many deafies who own sorensen, don't know how to find their ip addresses because their installers won't teach them how to find their ip addresses thru their computer for their videophone. i don't think it is not fair. sorensen videophone is really blocked for any videophone to call by phone number; therefore sorensen require for any vp to call thru ip address. i don't like to give sorensen my ip address because any hacker can go thru my computer. i prefer sorensen to use phone number instead of ip address.
